MANISH JHA

Technical Head | Unity UI, Rendering, VFX & Performance
+91-9599205371 | Delhi, India | dev.manishjha@gmail.com
Portfolio | LinkedIn

UNITY TECHNICAL ART & ENGINEERING

Figma to Unity UI: Implemented Figma designs as Unity UI across multiple game projects; UI layout implementation and collaboration with designers; UI Toolkit, USS and responsive UI.

Unity Visuals & Rendering: Unity Visual Effects, Particle Systems, Shader Graph, HLSL, URP/HDRP; animation integration.

Asset Pipelines & Optimization: Asset management and deployment workflows, Addressables, async loading, memory profiling and draw-call reduction; mobile performance optimization.

Tools & Production Workflows: C# scripting, internal Unity development pipelines and profiling tools; cross-functional collaboration with designers, artists and engineers.

Languages & UI Styling: C#, C++, JavaScript, TypeScript, Swift, GDScript, HLSL, CSS, USS.

Frameworks & Libraries: .NET, React, Next.js, Vue.js, Node.js.

Custom Engine Development: Custom OpenGL-based 2D RPG game engine; GLFW; SFML-based rendering development; DirectX familiarity.

Game Engines & Architecture: Unity, Unreal, Godot; OOP, design patterns, data-oriented design, DOTS/ECS.

Unity Gameplay: AI, physics, animation, state machines, input and camera systems.

Multiplayer & Performance: Photon Fusion, Unity Netcode, Mirror, Socket.IO; matchmaking, synchronization, prediction, lag compensation, hit registration; Burst, Jobs, pooling, async loading, memory and draw-call optimization.

Web & Mobile: Web applications, CSS; React Native and Xamarin for Android/iOS; Android SDK.

Backend & Live-Ops: Node.js, Express.js, Socket.IO, REST APIs; game servers, e-commerce servers and multi-game portal backends; PlayFab, AccelByte, Firebase, AWS (EC2, S3, Lambda), live-ops integration.

GAME DESIGN, AI & CREATIVE PRODUCTION

Game Design & Product: Game ideation, rapid prototypes, fun and market-potential evaluation; mechanics, GDDs, economy planning and spreadsheets; marketing knowledge and business analysis.

Technical Leadership: Project planning, engineering roadmaps, studio infrastructure, mentoring and cross-functional team coordination.

AI Engineering & Automation: Python, RAG, semantic search, embeddings, knowledge-base construction, offline AI-assisted coding agents and contextual code generation; LangChain, sentence-transformers, FAISS; n8n, Zapier, Make.

AI Assistants: ChatGPT, OpenAI Codex, Claude, Gemini, GitHub Copilot, Cursor.

Generative Media: AI-assisted audio, sound effects, music, UI mockups, concept/game art, sprites, textures and 2D/3D asset workflows.

Design & Art Tools: Blender, Maya, Photoshop, Illustrator, Figma, sprite tools, Substance Painter, Spine.

Audio Production: FMOD, Audacity, FL Studio; audio mixing experience from DJing.

DEVELOPMENT TOOLS & DELIVERY

Version Control: Git, Unity Version Control (Plastic SCM), Perforce, Mercurial, SVN.

Code Hosting & Git Clients: GitHub, GitLab, Bitbucket; SourceTree, GitHub Desktop.

IDEs & Editors: Visual Studio, Rider, VS Code, Xcode, Android Studio, IntelliJ IDEA, PyCharm, CLion, Eclipse, Sublime Text, Vim.

CI/CD & Infrastructure: Jenkins, GitHub Actions, GitLab CI/CD, Unity Cloud Build, Docker; Kubernetes (basic).

Profiling & API Tools: Unity Profiler, Unity Frame Debugger, RenderDoc, Android Profiler, Xcode Instruments, Chrome DevTools, Postman.

Planning & Documentation: Jira, Confluence, Trello, Notion, Linear, Asana, ClickUp, Monday.com, GitHub Projects.

Collaboration: Miro, Slack, Discord.

PROFESSIONAL EXPERIENCE

Technical Head | Dec 2025 - Present

Nexenova Studios | Noida, India

• Establish the studio's development infrastructure and workflows; manage cross-functional teams across the full game development lifecycle, alongside technical leadership.

• Implement Figma designs as Unity UI, working with designers to translate visual layouts into game interfaces.

• Lead projects from game ideation and gameplay planning through prototyping, validation, and production, coordinating delivery across casual, action, strategy, and multiplayer genres.

• Evaluate game ideas and playable prototypes for player enjoyment, gameplay quality, technical feasibility, and market potential to inform development priorities.

• Define and document game mechanics and game design specifications; translate GDDs into implementation plans, sprint milestones, and coordinated team deliverables.

• Plan game economies and build economy spreadsheets for projects in development, including Rubble Rivals and Relic Rivals.

• Lead and mentor Unity development and game design teams, establishing engineering standards, architectural guidelines, and review workflows.

• Architect scalable gameplay, backend integration, multiplayer communication, and progression systems; optimize runtime performance, memory usage, assets, and builds.

Tech: Unity (2D/3D), C#, UGS (Auth, Economy, Cloud Save), Addressables, Multiplayer Networking, Firebase/PlayFab, Git, CI/CD, Unity Profiler

Hypercasual Games - Google Play

Smashy Qube; Endless Merge 2048; Last Turn; Sweet Tumble; Twisty Snake; Park Escape

Casual Games - In Development

Rubble Rivals: Multiplayer game using Netcode infrastructure. Playable Android build.

Relic Rivals: Tower defense game. Playable Android build.

Loot League: Multiplayer game. Playable Android build.

PREVIOUS EXPERIENCE

Software Developer (SDE-2) | Sep 2024 - Aug 2025

Passion Gaming Pvt. Ltd. | Gurgaon, India

• Architected core socket and API communication using Cloud Content, Addressables, and a client-server model, improving data throughput and scalability for real-time features.

• Built internal development pipelines and profiling tools in Unity, reducing iteration cycles and improving asset management and deployment workflows.

• Performed performance tuning and memory profiling on UI and network modules, improving responsiveness across mid- and low-end Android devices.

• Collaborated with backend and live-ops teams on feature rollout, events, and stability for high concurrent user traffic.

Tech: Unity, C#, Socket.IO, Addressables, Cloud Content, PlayFab, Git, Unity Profiler

PROFESSIONAL EXPERIENCE - CONTINUED

Team Lead - Game Development | Feb 2023 - Sep 2024
SwordField Technologies | Ranchi, India

• Led end-to-end development of multiplayer NFT titles Warland Realm and Underground Waifus for Steam, Epic, and Android, achieving strong early download and retention metrics.

• Engineered MOBA and Battle Royale systems with lag compensation, predictive movement, and server-side hit registration, improving competitive fairness and engagement.

• Integrated blockchain-based play-to-earn mechanics with secure data replication, matchmaking, and progression systems.

• Drove optimization and profiling using DOTS/ECS and Unity Profiler, reducing load times and improving frame stability.

Tech: Unity, C#, Photon Fusion, Blockchain, Netcode, DOTS/ECS, Jenkins, Docker, Kubernetes (basic)

Game Developer | Mar 2021 - Feb 2023
TechBeliever Pvt. Ltd. | Noida, India

• Developed multiplayer Ludo, Chess, and Court Piece games for Khiladi Adda, contributing to 500K+ downloads and an uplift in user engagement.

• Implemented real-time synchronization using Photon and Socket.IO for cross-platform connectivity and low-latency gameplay.

• Optimized client-server logic, UI flow, and asset streaming, reducing network payload and improving FPS stability.

Tech: Unity, Photon, Socket.IO, Firebase, Google SDK, AdMob, PlayFab

Game Developer | Jul 2020 - Mar 2021
PinkTech Design Pvt. Ltd. | New Delhi, India

• Developed Beat Killer, a 3D rhythm-based single-player game, reaching 50K+ downloads within six months on Google Play.

• Used gameplay analytics and demographic insights to refine loops and difficulty curves, improving satisfaction and retention.

• Implemented OOP and event-driven architecture for scalable, maintainable gameplay systems.

Tech: Unity, C#, Firebase, Google SDK, AdMob

SELECTED TECHNICAL PROJECTS & COMMUNITY

Multiplayer Shooter / MOBA Systems. Character controllers, shooting, abilities and match flow with lag compensation, prediction and authoritative hit registration using Photon Fusion / Netcode for competitive and real-money use cases.

DOTS/ECS Multiplayer Prototype. High-entity-count simulation using Jobs and Burst, deterministic movement and efficient networking.

Live-Ops & Backend Integration. PlayFab / Firebase authentication, progression, leaderboards and events; analytics and remote configuration for A/B tests and seasonal content.

Community & Leadership. Mentoring in game-development communities on multiplayer architecture, optimization and career growth; cross-functional roadmaps, sprint planning and delivery with designers, artists and backend engineers.
